Expected outcomes

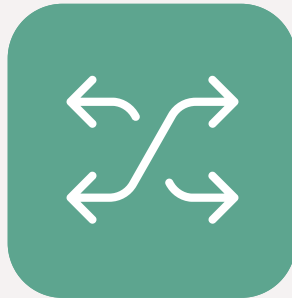

Executive Summary

This proposal outlines a secure and efficient employee survey system. Our solution leverages your existing HR employee database for faster, more reliable deployment. We emphasize security, flexibility, and ease of implementation to gather valuable employee feedback.

Secure Authentication

Implement robust employee verification to ensure only authorized personnel participate in surveys

Universal Access

Our system ensures all employee feedback is collected securely and confidentially, building trust and encouraging honest responses.

Rapid System Integration

Seamlessly integrate with existing HR systems and infrastructure where possible

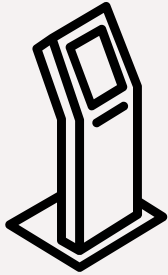

This proposal details a secure, flexible, and efficient path to implementing a robust employee survey system tailored to Dawn Foods' needs.

Proposed Solutions

We present four comprehensive solutions, each designed to address different infrastructure scenarios and security requirements. These solutions can be implemented independently or in combination based on Dawn Foods' specific needs and existing infrastructure.

Solution 1

Kiosk-Based Survey with Biometric Verification

Employees can authenticate using fingerprint attendance machines, tablets with face recognition, or self-service kiosks before filling out surveys, ensuring verified participation.

Solution 2

Mobile Survey with OTP Verification

A One-Time Password (OTP) is sent to each employee's registered mobile number. This ensures the survey is filled only once by the authentic employee, preventing duplicate or fraudulent submissions.

Solution 3

Unique Survey Links for Each Employee

Each employee receives a secure, personalized survey link via email or SMS. The link can only be used once and expires after submission, guaranteeing unique and secure responses.
